William Stallings Computer Organization and Architecture 10th Edition

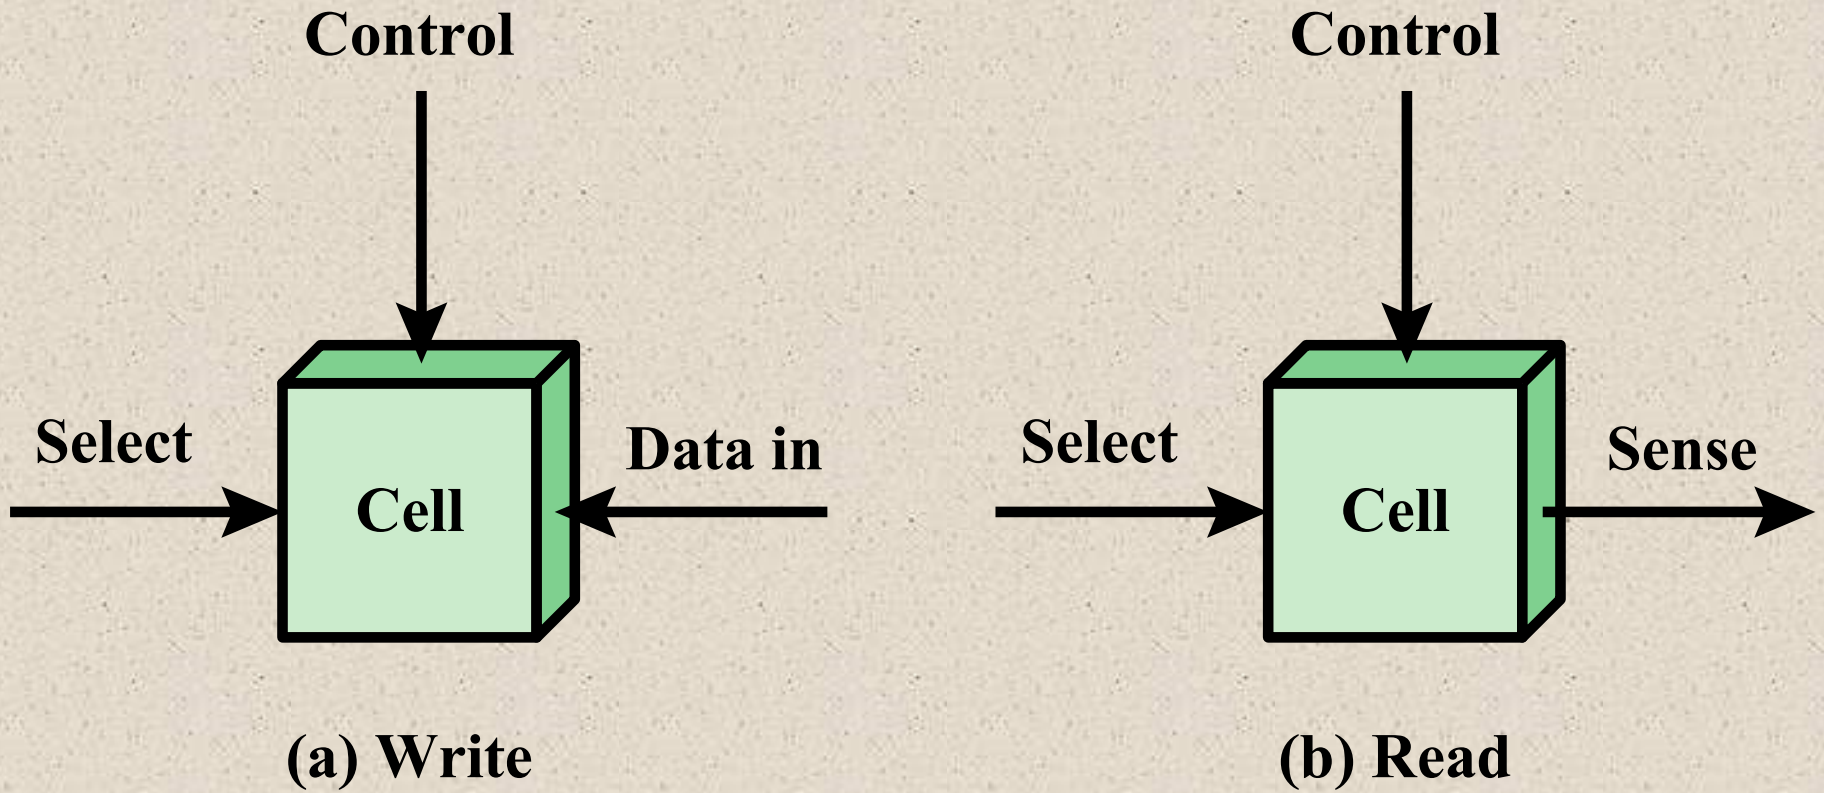

Figure 5.1 Memory Cell Operation

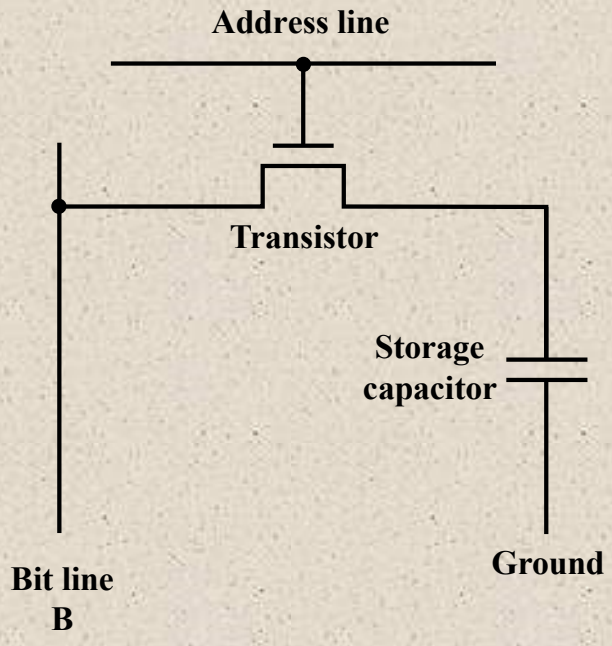
Memory Type	Category	Erasure	Write Mechanism	Volatility
Random-access memory (RAM)	Read-write memory	Electrically, byte-level	Electrically	Volatile
Read-only memory (ROM)	Read-only memory	Not possible	Masks	Nonvolatile
Programmable ROM (PROM)				
Erasable PROM (EPROM)	Read-mostly memory	UV light, chip-level	Electrically	
Electrically Erasable PROM (EEPROM)		Electrically, byte-level		
Flash memory		Electrically, block-level		

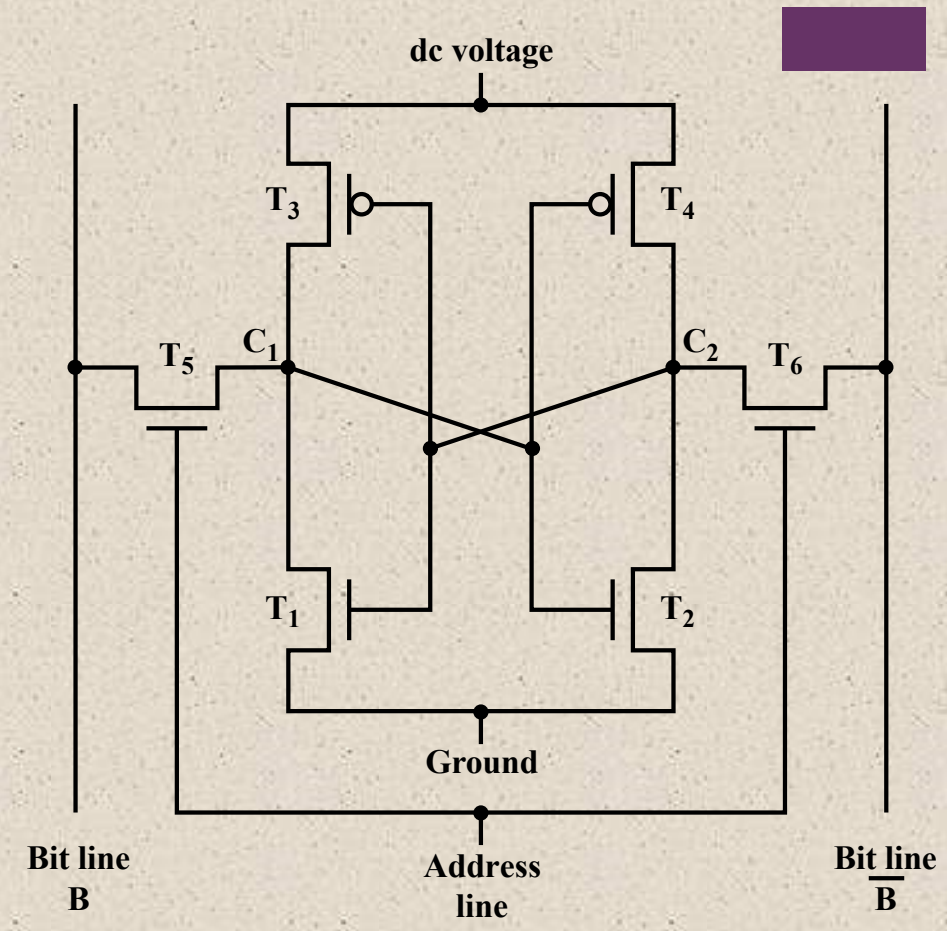
Table 5.1
Semiconductor Memory Types

Dynamic RAM (DRAM)

- RAM technology is divided into two technologies:
  - Dynamic RAM (DRAM)
  - Static RAM (SRAM)
- DRAM
  - Made with cells that store data as charge on capacitors
  - Presence or absence of charge in a capacitor is interpreted as a binary 1 or 0
  - Requires periodic charge refreshing to maintain data storage
  - The term *dynamic* refers to tendency of the stored charge to leak away, even with power continuously applied



(a) Dynamic RAM (DRAM) cell



(b) Static RAM (SRAM) cell

Figure 5.2 Typical Memory Cell Structures

Static RAM (SRAM)

- Digital device that uses the same logic elements used in the processor
- Binary values are stored using traditional flip-flop logic gate configurations
- Will hold its data as long as power is supplied to it
